Sean Barton

PAP1601 – DEV119-O Section 01

01/15/2016

My mission statement, for the most part, remains the same. I need to line myself up with my management to set aside time, when available, so I can work with software engineers in my current division of GE so I can learn and show my knowledge of programming to them to prepare myself for changing roles upon completion of graduating Full Sail.

TEM Mission Statement

My goal is to land a career as an android developer for GE Digital through hard work and dedication. I will learn the required knowledge for Android programming through the courses I'm taking towards completing my degree here at Full Sail. I will need to be proactive in networking with the correct personnel at GE so I can get my foot in the door upon graduating in 2018. I will stay motivated through the next few years and endure long nights of studying after working 12 hour shifts so I can become a grade A student and exceed the expectations of my instructors and peers. I will adapt to challenges by networking and studying; never fear defeat and strive for greatness!
